## **OBSERVATIONS**

RESPECTING THE

PUBLIC EXPENDITURE,

AND THE

INFLUENCE OF THE CROWN.

BY THE RIGHT HON, GEORGE ROSE

LONDON:
PRINTED FOR T. CADELL AND W. DAVIES, STRAND,
1810.

## OBSERVATIONS

RESPECTING

THE PUBLIC EXPENDITURE AND THE INFLUENCE OF THE CROWN.

THE right allowed to every rank of the people to discuss points in the public conduct of their rulers, and to the representatives of the people, when called upon by the voice of their constituents, or prompted by their own sense of duty, to institute enquiries into such conduct, has always been reckoned among the blessings of the British Constitution. Certain parts of the management of public affairs are peculiarly obnoxious to such enquiry; and the wholesome as well as habitual jealousy of both the people, and their representatives, watches over those who are entrusted with it with a spirit of scrutiny, which though occasionally inconvenient and some

Of these topics of strict investigation there are particularly two, which Parliament in its inherent and necessary function is frequently called upon to examine and to discuss, on behalf of themselves and of their constituents,—the Influence of the Crown, and the Public Expenditure; the last indeed as important with reference to the former, as from its own fubstantive effects on the ease and happiness of the people. Its importance, in both points of view, is in proportion to its magnitude; and now, therefore, when the circumstances of the times, and the fituation of the country, call for its exertion beyond all former example, almost beyond all former conjecture, it is doubly incumbent on the House of Commons to exercise that guardianship of the public purse with which it is invested, by increasing checks, and by frequent enquiry.

This part of its duty, Parliament has, in fact, performed within the last four-and-twenty years in a manner more efficient, as well as more active, than

(3)

than at any former period of our political history. It is perhaps fingular, and certainly most honorable to the individual Minister, that the same Chancellor of the Exchequer, whose duty it became towards the eventful close of the last century, to call forth as well as to manage the utmost resources of the nation, made it another part of his duty to institute the means of examination and controul of that expenditure which he was to direct and to apply. But there was in that (as indeed is the case in all such public measures rightly understood) not less political wifdom than political virtue; because the credit of the country will always rife in proportion to the provisions made, and to the measures adopted, for the fatisfaction of its creditors, and the conviction of the people, with regard to the justness and appropriation of its expenditure.

Besides the general construction (if the phrase may be allowed) of our government, adapted at all times to the purpose of checking excess as well as abuse in its expenditure, there should be an occa-fional adoption of enquiry to suit particular cases and particular departments. This mode is rendered indispensible from the complication, as well as the

B 2

novelty,

The precedents and practice of fuch useful enquiries, like the precedents and practice of all other great public institutions, it is extremely important should

(5)

should be unfolded and illustrated. It is with an intention to a discharge of that duty to the country, that the following accurate statement of the meafures which have been already adopted towards the attainment of the objects above alluded to, in one point of view, is made; fo as not only to fhew what has been done towards retrenchment of the public expence, and the confequent diminution of the patronage of the crown, but also to exhibit the prefent fubfifting state of fuch expence and patronage fo much in detail, as to afford every person the means of judging what further retrenchments may reasonably be expected, confiftently with the good of the public fervice, and, what in truth is fynonimous, with proper encouragement and reward of merit in the fervants of the public. -

Brought forward 224 ble value. The number of employments were not altered by the fuppression of the two Auditors of the imprest under the Act in that year, and the subsequent suppression of the Auditorship of hides, as three Commissioners were added to the two existing Comptrollers of Army accompts, to constitute the new Board then established. The subsequent acts added feven Commissioners, making the whole number ten,\* without the Comptrollers, who ceased to be auditors under the last act, and one was added to their number; but the office of one of the new auditors having lapsed by death, and not being to be filled up, the increase in this department on the whole to be deducted is - - - - -

Diminution in the number of employments, and faving in the annual charge in the Civil Lift and the Exchequer - - - - - - 217 Offices

Of the annual value of

(9)

In the Customs there was a class of offices, granted by patent, in the gift of the first lord of the treasury, absolute finecures, and many of them of great value\*: this patronage was the more defirable, as no local claims interfered with it at all, which left the minister at liberty to dispose of it among the relations and private friends of himself, or of those on whom he was most desirous of conferring favors. These finecure employments, to the number of one hundred and ninety-fix, amounting at that time in value to 42,000l. a-year, and which would now, from the increase of trade, have been worth much more, Mr. Pitt took a determination to abolish so early as Christmas 1784; from which time they remained vacant as they fell in. In truth he disposed of only two of those from his first entrance into office; one given for public fervices t, and the other for the support of fome of the younger branches of an ancient, noble

<sup>\*</sup> When the Act was depending in the House of Commons in 1806, the Author ventured to express an opinion, that increafing the number of Commissioners would rather retard than accelerate the examination of the public accompts; instead of which increase he proposed the addition of some more inspectors. Experience may now be reforted to, to decide whether that opinion was well founded. In

<sup>\*</sup> One of these, worth more than 1200l. a-year, was given by Lord North to the brother of Mr. Robinson, and another, of about half that value, was held by a gentleman in the Treafury for Sir Grey Cooper, the joint fecretaries of the Treafury.

<sup>†</sup> This was only a moiety; there was a furvivor in the patent, which prevented the suppression of the office.

family, utterly unprovided for. The act for suppressing this class of offices did not however pass till 1798\*, on account of regulations in contemplation for improving the management of the revenue of Customs, at which time there had fallen in 50, of the annual value of 13,320l.† That management in truth derived great advantage from the suppression of the description of offices here noticed, as the possession of them, holding by patents, conceived themselves amenable only to the Treasury or the King, and sometimes formally disclaimed any responsibility to the Commissioners of the Customs, to the manifest inconvenience, if not to the loss, of the revenue.

In 1789, upon a strong representation from the Commissioners of Excise of the utter inadequacy of the salaries of the officers in their department to their very moderate maintenance, especially having in view the great trust unavoidably reposed

( II )

in them, the Treasury made considerable augmentations thereto, sufficient to place the officers in situations of reasonable competency. That was done with double profit to the public; as the revenue was not only benefited by the officers being rendered independent of the traders, but, by a reduction of the expence of management, seven hundred and fixty-sive officers having been then reduced; which effected an annual saving, after allowing for the augmentation of salaries to those remaining, to the amount of 12,3451. But no abatement is made for that arrangement here, it being included in the general statement of the Excise revenue under that head.

From this time to 1798 no reduction of any confequence took place; but in that year when the duty on falt was doubled, it occurred to Mr. Pitt that the revenue on that article might be better collected, and a confiderable faving effected to the public, by the management of it being transferred to the Excife; which was done accordingly \*, and the Salt Board with the whole establishment under it

<sup>\* 38</sup> Geo. III. c. 86.

<sup>†</sup> These since offices at all the out-ports are to be found in the Court Calendar of 1751, p. 102. They were at that early time described as worth 2, 3, 4, and 500l. a-year, with the appointment of valuable deputyships of great profit. They have been since omitted for obvious reasons.

<sup>\* 38</sup> Geo. Ill. c. 89.

fuppressed, by which the Treasury lost the appointment of four hundred and sifty-nine offices of different forts; but two hundred were added to perform the new duty under the Excise. In this case also as the diminution and addition of officers will be included in the general statement of revenue officers, no further notice of it will be taken here, except to observe that the Treasury lost a patronage equal to the extent of the whole Salt establishment, the new officers being all in the gift of the Commissioners of Excise, with whose appointments the Treasury have very little interference.

The offices of the Auditors of the Land Revenue for England and Wales next attracted the attention of Mr. Pitt. The duties of these, it appeared to him, were of a nature which would very well admit of their being performed by the Commissioners for auditing the Public Accompts: one was held by two gentlemen for their joint lives, the two others during pleasure. These were abolished by law in 1799\*, at which time the reversion of the most valuable, worth more than 3000l. a-year, was

\* 39 Geo. III. c. 83.

open.

( 13 )

open. The reduction then effected was to take place upon the death of the possessors.

These three offices were of the annual value of 5500l., which, added to those in the Civil List and Exchequer, and the patent since employments in the Customs, absolutely unconnected with the collection of the duties except in two or three cases, make the reduction as under:

	Offices.	- Annual Value.

In the Customs	196	42,000
In the Land Revenue	3	5,500
the state of the s		***************************************
Making a total of faving on official		
establishments	416	£ 275,748

To these reductions of expence and influence, arising from what was done with respect to offices, should however be opposed the new establishments which have been made, and the new offices created within the same period, from the necessities of the public service.

The business of taking up transports and conducting the whole of the service (which during the American war had been principally managed by the Navy Board, but in some instances had been

per-

performed by individuals on commission to their own profit) had been found to interfere so essen. tially with the other duties of the former as to render it indispensibly necessary to establish a Board for that purpose in September 1794. In January 1796, the business of Prisoners of War was put under the direction of this new Board; and in 1806 the whole department of the Sick and Hurt was fuppressed, and the duties transferred to it also, which leaves the balance as follows:

Offices added, Commissioners of Transports Secretary to do	No. 6	Salaries. 6,400 1,000
Offices fuppressed, Commissioners of Sick and Hurt, and Secretary to them	7	7,400
Increase of officers and salaries in consequence of the establishment of the Transport Board	<del>4</del> <del>-</del> 3	2,065 <del>2</del> 5,335

The establishment of a separate Board for the Transport service was strongly recommended so early as in 1788, by the Commissioners of Enquiry; and the advantages experienced from the adoption of it early in the war have most fully justified a compliance with that recommendation. These adwantages are detailed at fome length in a paper of Novem( 15 )

November 1801, in Sir John Sinclair's History of the Revenue \*. Referring to that for more particular information, it will be fufficient here to state with precifion the favings in direct expenditure.

In a former publication by the author, he referred to a representation by the commissioners to the committee of finance in 1798, when they faid, "They have faved the public fome hundred thou-" fand pounds, which but for their close and con-" ftant attention, would have been loft; adding, s that if the three Boards engaged before this " time in hiring transports for their respective fer-" vices, had each of them, through the weight of " business, or want of attention, taken up one ship " of a moderate fize more than was necessary, or " permitted one ship for each branch to remain " unemployed, the pay of those transports, exclu-" five of incidents, would have amounted to more " than the whole official charge of the new Board, " and all the clerks under them." A fingle instance, after its establishment, will afford proof that this was no exaggeration. The barrack-office,

<sup>\*</sup> Vol. II. p. 137.

It must indeed be evident that much inconvenience and loss was unavoidably fustained by the management of hiring ships having been under Boards which had other important avocations to attend to, more immediately connected with their departments. The examination of the veffels, refpecting fize, fitness, &c. necessarily devolved upon inferior officers, which business is now very differently conducted; and on fome occasions transports were taken up by officers commanding regiments or detachments, who could form no judgment either as to the hire or the tonnage of the ships; a practice that frequently led to an useless continuation of hire by demurrage; which has been avoided by firict examinations of log-books and papers: a great waste of stores has also been prevented, by a strict investigation of the expenditure and return of all articles.

Exclusive,

( 17 ) -

Exclusive, however, of the benefit which must have been derived from the improved management generally, some particular heads may be stated, the savings on which are capable of being ascertained with a considerable degree of accuracy. The particulars will be enumerated, and will prove that they are forty times greater in amount than the charge incurred by the creation of this Board \*.

This will not appear fo furprifing, when it is confidered that naval men must be more competent than others to manage sea-faring prisoners of war, as well as to engage proper vessels for cartels. One more striking advantage should not be omitted, viz. the speedy and strict examination of accompts, which had accumulated under the Sick and Hurt Board. Arrears to the amount of 940,000l. have already been settled; notwithstanding which, the accompts of the last war are not yet all adjusted; whereas those of the present war are in such forwardness, that if the same punctuality shall continue to be observed, the whole will be completely brought up and settled in a few weeks after a peace. In addition to all which advantages, a new

<sup>\*</sup> See p. 31 and 32.

department has been created for checking the delivery and returns of stores, medicines, and necesfaries of every surgeon in the navy, as well as of the surgeons and agents of hospitals at home and abroad.

The relief thus afforded to the Navy Board, by removing the transport business from under their control, still left their establishment unequal to providing for the widely extended operations of this war, which rendered a confiderable increase to it absolutely indispensible. The number of commisfioners of the navy was found altogether unequal to checking the expenditure in its various branches, providing at the same time for a strict and close examination of accompts, as well of the receipt and expenditure of stores as of cash; especially as, on foreign stations in particular, opportunities were afforded for abuses to an immense extent, from the want of a superintending and controling authority on the fpot: the best remedy for which it was conceived would be the appointment of resident commissioners at certain places abroad, where there had been none before. On the whole, between 1798 and 1809, there were added eleven principal officers and commissioners of the navy at home, including those

( 19 )

those at Sheerness and Deptford, and four abroad: But four at home and two abroad were discontinued between 1784 and 1795, when it was thought their services were not required; which is a clear manifestation that nothing but the public good was in view when the additions were made. The most important of those took place indeed on the recommendation of the commissioners for naval revision. On the whole, within the period of our inquiry, the additions and diminutions of the principal officers and commissioners of the navy are as follows:

	No. of Offices.	Salaries.
Added	15	15,900
Reduced	б	4,300
On the balance an increase of * To which is to be added an aug-	9	11,600
mentation of falaries		8,300
Carried forward	9	19,900

\* When the falaries of the Commissioners, as augmented, are compared with the arduous duties they have to perform, as well as the incessant labor attendant thereupon, it will not be thought they are over-paid. This observation applies most strongly perhaps to the commissioners in the dock yards; and in a most particular manner to the one at Portsmouth, whose salary is 1,200l. with a house, and an establishment necessary in his particular situation to be kept up for receiving strangers and officers, which cannot be maintained at much less than twice that sum.

Increase to the salary of the first Lord of the Admiralty to	9 19,900
Lord of the Admiralty to	
make it 5,000l. nett; still	
lower than the falaries of the	
Secretaries of State	2,150

made; but to their ordinary duties,	
which were increased beyond what	
they had been in any former war,	
there was added, in 1794, the pur-	
chase of provisions and all victual-	
ling stores for the army on foreign	
flations, which compelled them to	
a long attendance daily, instead of	
the moderate one of three days in the week before that business was thrown	
upon them; which induced an aug- mentation of falaries and allowances	
	•
to the Commissioners and their se-	
cretary, amounting to	3,450
Total increase of naval establishments	
of all forts	9 £ 25,500

But in this case, as in that of the Transport Board, savings were effected greatly exceeding the increased expence, as will be plainly shown in another place.

The

The Board of Control for the Affairs of India was established in 1784,\* confisting (exclusive of a number of members without falaries) of three Commissioners and a Secretary, at the expence to the East India Company of - - - 6,5001. And about the fame time a committee of the Lords of the Privy Council, with a Prefident and Vice Prefident, was appointed to transact the business which had been formerly executed by the Board of Trade: but the members composing it, holding other offices of profit, have no falaries for heir duty. The only expence, therefore, attending the establishment to be taken into this estimate is 500l. a year each to two clerks of the Privy Council, who attend as fecretaries, making an annual charge of 1000l.

The only remaining branch to be added to the increase of Establishments is that of the Barracks; and it is become a heavy one. What the difference of expence is between the maintenance of troops in quarters and barracks is extremely difficult to

**L** 3

ascertain;

<sup>\*</sup> By 24 Geo. III. c. 25.

as to have defeated the utmost endeavour that has been used for the purpose: but the investigation which has taken place, at the expence of much labor in the offices, leads to a persuasion that the author was under a mistake, when he expressed an opinion in a former publication that the barrack system was one of economy; he fell into the error from a statement of the late Barrack Master General, who most assuredly thought it was a correct one when it was made; or he would not have allowed it to go out to the world under the sanction of his authority. The establishment is very large and very expensive, much exceeding any conjecture the author had formed on the subject.

It would, however, certainly be unjust to confider this part of the subject drily on a comparison of the number and value of the offices: it should in fairness be adverted to, that a very considerable part of those abolished were absolute sinecures, many of them for life, and that some of the most valuable were open to grants in reversion\*; some, as already observed, mischievous from the nature of the appointments; and most of the remainder useful only to the parties, and as sources of influence to the minister: whereas the employments created have all been positively required by the necessities of the public service, and demand constant and laborious attendance. Of course, the

influence

( 25 )

influence derived from the latter is most essentially different both in its degree and in its direction. Of the former, influence was in many cases the direct object; of the latter, it is only an incidental and unavoidable consequence.

If we were to stop here, it might not unreasonably be asked, whether any candid man can refuse to admit that much has been done for keeping down the official charge upon the public, and towards temperately diminishing the influence of the Crown.

Mr. Pitt, however, did not confine his views to what might be done by official arrangements, but, looking anxiously to reforms, wherever they could be made, he effected many more confiderable favings to the public than those we have enumerated, and at the same time facrificed an influence as Minister, much more dangerous than any possessed by the Crown, because more secret and unobserved; the extent of it, indeed, could be known only to himself, and to those immediately in his confidence. We shall state the measures to which we allude in their order, beginning

<sup>\*</sup>One Auditorship of the Imprest, the most valuable office of the whole, soon became vacant; an Auditorship of the Land Revenue, and the King's Remembrancership were grantable in reversion.

with Loans and Lotteries; which used invariably to be fettled by bargains made between the Chancellor of the Exchequer and a certain number of persons, felected by him: then shewing the profit to the public, by putting an end to the practice of making private contracts with perfons intended to be favoured, for fupplying the troops on foreign stations with provisions and money, and fometimes for furnishing ships, as already alluded to; and closing this part of the account with the profit derived from the mode irrevocably established respecting the renewals of crown leases. In each of which cases the influence diminished was not only extensive, but was obviously in its nature much more objectionable than any that could be acquired by the disposal of offices; as the effect of the former was fecret and unobserved, whereas the latter is apparent and generally known.

The former practice, of making loans, was for the Minister to settle, with a few select friends in the city, the terms on which they should be made; and then to give these, lists of more private friends, intended to be favored, with the specific sums for each. Under such a system it cannot be doubted

( 27 )

doubted but that the conditions were, in general, fufficiently favorable to the contractors, and that it was always intended they should be for In one instance, in the latter end of Lord North's administration, the Scrip was at a premium of 10l. per cent, two days before the names of the fubfcribers were fent to the Bank from the Treasury. Of course, every 10,000l. allotted to a private friend was precifely the fame thing as putting a thousand pounds bank note into his hand. Mr. Pitt, feeing all the evils of fuch a practice, originated the principle of open competition for loans, by giving public notice in the city, through the Bank of England, that he would receive proposals from as many fets of gentlemen as should be inclined to make them, and would accept the lowest tenders that should be given in by persons of known credit\*; which tenders were to be opened in the presence of the Governor and Deputy Governor of the Bank, in order to guard against any partiality on

<sup>\*</sup> The Governor and Deputy Governor of the Bank were always previously consulted as to the competency of the persons who sent in lists; and only one instance is recollected of a doubt having been expressed of the sufficiency of those who desired to offer

the part of the Chancellor of the Exchequer; and into the hands of those two gentlemen was previously put a memorandum, sealed up, of the lowest terms that would be accepted on the part of the public, to prevent any possible collusion, by a combination among different fets of persons offering for the loan.

It would be difficult to compute, with any degree of correctness, the exact fums that have been faved by this fystem, first introduced, and steadily adhered to by Mr. Pitt; but, referring to the actual premiums at which the Omnium on the loans fold, on the first appearance of each in the market, in the years stated in the note \*, it would be a mode-

rate estimate to put it at 31. per cent.; and as 274,000,000l. has been borrowed fince 1793, for the fervice of Great Britain only, exclusive of navy and exchequer bills funded, the faving to the public in feventeen years may be computed at 8,220,000l. equal to 483,000l. a year.

The immediate faving by Mr. Pitt's measure of directing the purchases of provisions, and of stores of various forts, to be made by the Commissioners of Victualling, which had under former governments been a fource from whence his predeceffors had derived great as well as unobserved influence, comes next under our confideration.

The practice had been for the Treasury to give beneficial contracts to persons selected from favor for purchasing all articles of those descriptions, and for remitting money to foreign stations; from whence the individuals derived large profits, and the public fuftained confiderable lofs. Mr. Pitt therefore, at the very commencement of the last war, put an end to that fystem entirely, and directed that all provisions for the army should be procured by the Commissioners of the Victualling; and on the

( 31 )

is however taken into this account for favings in consequence of these contracts having been put an end to, as they were of uncertain amount; nor for the loss avoided by the Transport Board now purchasing stores, instead of favored individuals.

Here it is proper, however, we fhould bring to account the actual favings made in the departments now under the direction of the Transport Board, to which we before generally referred.

Since the business of the Prisoners of War has been placed under the direction of the Commissioners for Transports, fifteen depots at home, and four abroad, have been suppressed; by which a diminution of annual expence has been effected of at least £ 14,000 The Commissioners reduced the price of the rations of the prisoners of war, in 1796, from  $8\frac{3}{4}d$ . to  $6\frac{1}{2}d$ . a day, at which it has continued, notwithstanding the increased price of provisions; chiefly by a partial substitution of salt fish for the same quantity of beef; which, for the number of prisoners before the arrival of those from Walcheren, would be an-

Carried over, £ 175,000

\* That the prisoners of war have not suffered in their health by the change of the ration is evident, as they are now as healthy as they have been at any time. When this account was received in Sept. 1809, there were confined at Norman-Cross 6000, of whom only seven were sick. Would to God there were only the same proportion of British prisoners in France on the fick lift!

The next great and important head of faving effected by Mr. Pitt was in navy and victualling bills and ordnance debentures.

A very large part of the expenditure of the navy is fatisfied by bills which in the American war were

( 33 )

at a discount from 10l. to 11l. and 13l. per cent. \*, those without interest at double that amount, although always paid within eighteen or twenty months; the loss arising from which Mr. Pitt endeavoured to correct in 1794, by obtaining an act to ascertain the punctual payment of all such bills at the end of fifteen months, with interest from their date. That, however, failing in its effect, another act t was passed in 1797, to insure the bills being fatisfied, with interest, in 90 days from the date; fince which the payments have been confidered the same as if made in cash. The parts of the naval expenditure fatisfied in this manner, in the prefent war, have amounted to more than 10,000,000l. annually; reckoning the difcount, therefore, on the whole of the interest and non-interest bills so low as 111. per cent., the faving to the public annually would be 1,100,000l.

\* \* \* \* . . .

The last head of saving by management, is under that of the effates of the Crown. The act of the 1st of Queen Annet, continued at the beginning of each fucceeding reign, for limiting grants of crown lands to 31 years, put a stop to the actual alienation of the property of the Crown; but, in its operation, had the effect of greatly adding to the influence of it, and certainly afforded no protection whatever to its revenues, as will be feen in the note below ! . In reigns antecedent to that of

Queen

( 35 )

Queen Anne, when grants were perpetual, the persons to whom they were made became immediately independent of the Crown, and not unfrequently gave very early proofs of that independence: whereas, by the measure adopted on the accession of the Queen, every grantee, or the perfon reprefenting him, became dependent on the minister for a renewal of his lease, for which applications were generally made at fuch times, and on fuch occasions, as were thought to afford the best hope of their being attended to, on terms favourable to his interest.

Under this fystem Mr. Pitt, on coming into office, found the whole landed property of the crown, and the income arising from it, in every way, very little exceeding 4,000l. a-year. He therefore, after long enquiries, and most attentive confideration, applied a remedy in 1794, when an act\* was passed, by which it is provided that no lease shall be renewed till within a short period of its expiration, nor till an actual furvey shall have been made by two professional men of experience and character, who are required to certify the

<sup>\*</sup> See Finance Report 1782, p. 22. + 1 Ann. st. 1. c. 7. In 15 years, to 1715, the whole income from crown

lands, including rents, fines, and grants of all forts, was 22,624l., equal to 1,500l. a-year. Journals of H. C. vol. 20. p. 520.; and in 7 years, to 1746, was 15,600l., equal to 2,228. a-year. Journals, vol. 25. p. 206.

<sup>\* 34</sup> Geo. III. c. 75.

true value of the premises to the Treasury, attested

on their oaths. No abuse can therefore take place,

nor any undue favour be shewn, under the pro-

visions of this law, unless surveyors of eminence in their line shall deliberately perjure themselves, or a Treafury shall be found bold enough to grant leases, or renew them, at a less value than shall be certified to them, which could not escape immediate detection, as there is a clause in the act requiring an account to be laid before Parliament annually, " of what leafes or grants shall have been

made in the year preceding; for what terms or

" estates; the annual value, as returned on oath

66 by the furveyors; the annual value of the last or preceding furvey; what rents shall have been

referved, or what fines paid; and upon what

other confiderations such leases shall have been

" respectively made."

More strict provisions to guard against any evafion of the law could hardly have been devised. Under this management the revenue arifing from the eftates of the Crown has increased, in the fifteen years since the law took effect, from 4,25 rl. to 63,8621, and will go on improving till it ( 37 )

amounts to about 400,000l.\* And this augmentation of revenue is accompanied by a material deprivation of influence, as above alluded to, which the minister formerly derived from the powerhe exercised over the property of the Sovereign. To what an extent that might be available to him, fome judgment may be formed by observing, that of the persons holding Crown leases when the act was passed, upwards of eighty were members of one or the other House of Parliament; and it is hardly necessary to add that, in the cases of other lesses, the parties, who might have the means of doing fo, would naturally refort to folicitations of friends for obtaining the minister's favor. The profit from this arrangement is already, as stated above, annually 59,6111.

There remains still one other head of expence and influence, that has been restrained within the period on which we have been observing: we allude to the Home Secret Service, limited now to

<sup>·</sup> See Report of the Surveyor General of Crown Lands. dated the 1st of Dec. 1797. Printed copy in the House of Lords, p. 20.

## ( 38 )

to,000l. a-year, which was before unlimited \*:
but as the iffues on that head were fluctuating
and uncertain, though fometimes to a very large
amount, no credit is taken for them in the following general estimate:

These measures of œconomy, and for correcting abuses, were followed up by other laws, in the administration of Lord Grenville, for ensuring the payment of the public revenue, in various branches, regularly into the exchequer, and guarding against abuses in the expenditure of it \*; and for abolishing some offices in the customs, and regulating others, in Ireland, on a similar plan with the one adopted in England †; also for an examination into abuses in offices in Ireland ‡.

The course, we proposed to pursue, leads us next to consider the state of the influence of the Crown, as derived from the number of persons in the House of Commons holding employments during pleasure now, and who held such at some former periods. By the Civil List Act in 1782, the undermentioned offices were abolished; many of the pos-

<sup>†</sup> It should here be noticed again, that the savings to arise from the regulation of two of the Tellerships, and the abolition of the two Chamberlainships, and Tally-writership in the Exchequer, the Auditorships of the Land Revenue, and the profits arising from such of the patent offices in the Customs as have not fallen in, will not be effectual till the deaths of the holders; but the Acts having passed for the several measures, the purposes cannot be defeated.

<sup>\* 46</sup> G.III. c. 45. 75. 76. 80. 82. 150.

<sup>†47</sup> G. III. c. 12. ‡47 G. III. c. 41.

fesfors of which were usually in parliament; and when the measure was adopted, the numbers following were actually in one or the other house; viz.

House of Lords.	Commons.
Board of Trade 1	5
Paymaîter of Penfions 1	
Lords of Police, Scotland 4	I
Jewel Office I	1
Great Wardrobe I	I
Treasurer of the Chamber	2
Cofferer of the Household	2
Clerks of the Green Cloth	6
Board of Works	3
Master of the Harriers - I	
Master of the Fox Hounds	1
	22
To these should be added eleven members of	
the House of Commons who held beneficial contracts under the Treasury *, and four un-	
der the Ordnance and Navy Boards; fome	the transfer of
with the three Boards	- 15
	37

There are, therefore, nine peers, and thirtyfeven members of the House of Commons, under direct influence, less than there were in 1783, in consequence of legislative provisions. If the admi(41)

nistration had been disposed to counteract these measures of the legislature, some persons, whose offices were not abolished, might possibly have obtained feats in the House of Commons, to countervail a part of the feven and thirty who were difqualified. It will be feen, however, that so far from any fuch attempt having been made, there are much more than 22 members fewer now in the House of Commons, holding employments during pleafure, than in any period that can be traced; the means for doing which will, however, enable us to go back only 70 years. Of the contractors, &c. there are no means of making comparisons,

There are at present members of t	he House of
Commons, holding places of profit	t during plea-
fure, in Great Britain *,	40

\*In the Supplement to the Third Report of the Committee of Finance, made at the close of the last session of parliament, the number stated is 41; but we deduct Captain Hope, who is not in office; Mr. Johnstone's was not an office of profit; Mr. Wellesley Pole is reckoned twice; Sir John Nichol no longer holds an office during pleasure; and we add Mr. Jenkinson, and Mr. Calvert, not holding immediately under the Crown, and Mr. Johnes, as his office is not

& m 1705 there were 93 comple.

<sup>\*</sup> Taken from lists presented to the House of Commons in April 1782; and preserved among the papers of that session. nistration

In 1756 there were	74
1762	96
1769	89
1775	78
1781	65

If, therefore, 15 contractors, the number stated to parliament in 1781, are added to the smallest number of persons holding employments between 1739 and 1782, it will be seen that the persons now in office, in the House of Commons, are exactly equal to the half of the lowest number, at any time within that period.

Those, however, who complain of a prevailing influence in the House of Commons, do not confine their objections to civil employments, but refort to the great numbers of naval and military officers, who, from the great increase of the navy and army, have seats in that house. Let us, therefore, make a similar examination respecting members in that class.

These comparisons are made to meet the complaint referred to; but if the parliamentary conduct of the gentlemen in these two highly honourable professions is adverted to, there will be no reason to think they are more under an undue influence than members of other descriptions. To what extent influence is derived from the disposal of commissions, in either service, from the large establishments of both, to persons not in parliament, the author has not much better means of judging than the public at large, who see the appointments in the daily papers; as he has good reason for believing that Mr. Pitt interfered very little with the patronage of the Commander in Chief, or the Admiralty.

In times not very remote, indulgence was shewn to persons in lucrative employments, holding large sums of public money in their hands, in some instances for many years after they retired from them, from whence they derived immense profit, at a considerable risk, as well as certain loss to the public; which practice was checked by Lord Shelburn and Mr. Pitt, and finally put an end to by a law\*, introduced by the present Speaker of the House of Commons, whose useful exertions as chairman of the Committee of Finance in 1797, have very greatly contributed to important and useful regulations.

A further protection against abuses is afforded by the simplification and publicity of accounts, first afforded to the public by Mr. Pitt. What malpractices were screened by the intricacy and secrecy of them formerly cannot now be known; but that the system was highly objectionable, cannot be doubted. One instance of concealment, and another of confusion, will serve to shew the correctness of this affertion.

Upon the application to parliament in 1769 to pay the Civil List debt of more than half a million, a pro( 45 )

pofal was made to defer the confideration of His Majesty's message till an enquiry should take place respecting the cause of the debt; which was negatived without a division, as highly unreasonable. A motion recommending retrenchments met with the same fate; another then was humbly submitted, merely for an account of the pensions and increased salaries from the commencement of the present reign; which was thought so perfectly reasonable, that a division was hazarded upon it; but it failed also, Mr. Fox, one of the Tellers for the majority\*: so little disposition was there at that time to gratify such curiosity.

The inflance alluded to of confusion in accounts is so late as in 1782. The Committee of the House of Commons, then appointed to examine the accounts of the revenue and expenditure during the American war, stated, that they thought it right to call for

<sup>\* 39 &</sup>amp; 40 Geo. III. c. 54; for inforcing the payment of balances by Public Accountants; and compelling them to pay interest for money in their hands in the mean time.

pofal

<sup>\*</sup> Commons Journals, vol. 32. p. 265. 465. 856. 866. Colonel Barré, in one of these debates, said, "When I was Vice treasurer of Ireland with Lord Clare, we always paid the money first, and then examined if we owed it." Debates 1769. p. 126.

an account of the nett produce of all the taxes, from 1774 to 1782, that a judgment might be formed whether, among other causes of diminution, the old taxes might have been affected by those imposed within the period; which they printed in their Appendix, "imagining it might be fatisfactory " to the House;" from which account no man living could form the remotest judgment on the fubject, without taking indefatigable pains, and then not without official affiftance for the purpofe stated; as different heads of one revenue were fo blended with those of others, as to render it difficult to distinguish to which each head belonged. But, what is still more remarkable, the amount of all the duties in the feveral years was not fummed up, fo as even to shew what the produce of the whole revenue was in any one year. If that fimple operation had been performed, it would have been discovered that, at the close of that war, the income of the country was only 1,755,000l. a-year higher than at its commencement, although the addition to the charge upon it was 4,864,000l., on which the committee did not make the flightest observa(47)

observation\*. The only remaining source of influence, except pensions and sinecure places, which will be separately noticed, is the Church; that cannot have increased, and has never been considerable: as far as respects the dignitaries, it is public, and generally known; the livings in the gift of the first Lord of the Treasury are few; those in the disposal of the Great Seal are much more numerous; but, as far as is consistent with the knowledge of the author, the Treasury derives very little aid from the patronage of the latter. This limited source of influence is the only one now remaining on which every person is not as well informed as the Minister.

There have, indeed, been hints thrown out of other means of influence and favour, by quartering

<sup>\*</sup> We may, perhaps, be told, that Mr. Pitt was a member of this committee; but when it is recollected that Mr. Thomas Pitt (afterwards Lord Camelford), Colonel Barré, Mr. Huffey, the prefent member for Salifbury, Mr. Baker, the late member for Hertfordshire, Lord Minto, and the late Mr. Powis, all members of experience, and men of abilities, were also upon it, and that Mr. Pitt was then entering ardently into the labours of the profession he had chosen, no imputation will attach on his memory for neglect or carelessiness.

(49

be no danger of fuch a practice in any instance in future, under the strict provisions of the act \* of last session, for the further prevention of the sale and brokerage of offices.

However fatisfactory the refult of this investigation of the measures adopted for useful and œconomical purposes may be to those, who have shewn a readiness to admit that the legislature and government have not been remifs in their conduct in that respect, if we were to close our enquiries here, the most candid might persevere in faying that, giving the fullest credit both to parliament and ministers for the best intentions towards the public interests, still the immense augmentations to the revenue fince 1793 must have rendered the appointment of an overwhelming number of new offices indifpenfably necessary for the management and collection of it. We are therefore induced to bring this part of the subject also under an accurate examination.

<sup>\*</sup> In one instance of a vacancy by death in the West Indies, an officer who lost his employment by the peace in 1783 was appointed to one infinitely more valuable, on condition of paying annuities to other loyalists, in order to relieve the Pension List; but this, as in the other cases, was an arrangement officially made.

These are the great branches of the public revenue; to the smaller ones no addition has been made at all worthy of notice, either as to increase in the amount, or to the number of officers employed in the collection of them.

The result of this careful and attentive investigation appears to be, on the most unfavorable way of making the comparison, that addi-

tional taxes, to the amount of very near 44,000,000l. are collected by an addition of 934 officers, almost the whole of whom are in the inferior classes; and that, while the revenue has been augmented in a fixfold proportion, the officers employed in the management and collection of it have been increased only one-tenth in number. But if the customs are withdrawn from the account, as they should be in forming a comparison of this fort, because a very large proportion of the officers in that department have been added to afford accommodation to the trade of the country, rendered indispensably necessary by the immense increase of it\*, the comparison would then stand thus:

Increase, exclusive of Customs, within Amount of No of Revenue. Officers. the period - - - - - - £ 38,407,000 67

It should be observed also that, in the department of the Assessible Taxes, the additional officers have been appointed as well for the improvement of the old duties, as for the collection of the new.

Hitherto we have confidered the effect of the new taxes with reference only to-influence; let us now

<sup>\*</sup> These charges of collections include poundage as well as falaries; by far the greatest part of the former is paid to persons not holding offices under government.

tional

<sup>\*</sup> The exports of British manufactures, in the first three quarters of 1809, are more than twice the value of those of the whole year in 1793, the first year of the last war.

	\$ 878,418

An additional revenue, therefore, of 44,000,000l, is collected for rather less than 2 per cent., according to the statement above; but this would be a most unfair view of the subject, as a great part of this expence would have been indifpenfably necesfary for the protection of the old revenue. The increase in the excise is nearly altogether for the augmentation of the falaries of the officers on the establishment, to enable them to exist, before the new taxes were imposed. The expence for tobacco officers, as has been ftated, has been much more than reimbursed by the improvement of the revenue. A confiderable part of the increased charge in the Customs has arisen from falaries ( 55 )

having been established for the officers, in lieu of fees, as observed in the note in the preceding page, by which the revenue has, beyond all doubt, profited to a much larger amount than the expence incurred: and it may be stated, with perfect certainty, that the additional charge in the department of Affeffed Taxes has been much more than compensated by the increase of the revenue from the exertions of the new officers.

The charge of managing the whole revenue of the kingdom appears now annually in the accounts laid before parliament, an attention to which will convince any one who has confidered the fubject extensively, that there is not a country in Europe where the taxes are collected at fo moderate an expence as in this \*: it may indeed be questioned

having

<sup>\*</sup> A confiderable part of this fum arises from augmentations to falaries, in lieu of fees abolished, to secure a better management of the revenue.

<sup>\*</sup> For the economical management of the revenue of Great Britain, compared with that of other countries, fee the Fourth Report of the Committee of Finance in 1797, page 36. The fidelity of accompting for the public revenue is not lefs remarkable, than the economical mode of collecting it. In a pamphlet published by the author in 1792, he had the gratification of flating, that during many years previously to that time, the only defalcation, that had happened in the receipt and remittance of all the revenues of the country, was a few hundred pounds lost by letter-carriers; and in the period which has elapfed fince

These statements will be found intelligible, it is hoped, even to persons who are the least conversant with subjects of this kind; and they are made in such a manner as to afford the easiest means of detection, if any unintentional error shall have escaped the diligence of the author. If their accuracy shall stand the test of the closest scrutiny, ought any one, in suture, to indulge himself, for the sake of popularity, or from any other motive, in making declamations, either in or out of parliament, about the increased and increasing influence, of which we have frequently heard so much of late; and the immense

that publication, the same observation may be repeated, with one exception only of any importance, in the case of a collector of excise; a great part of whose balance however has been recovered, and the whole may be. In any event the sum in danger appears to be under £10,000.

† Nearly the greatest number of civil employments, held by members of parliament during pleasure, appears to have been in 1769, when Mr. Dunning was Solicitor-General, during the administration of His Grace the Duke of Graston; to which no objection then occurred to that gentleman, or his friends: but, tired with a long opposition, at the end of an unsuccessful war, (which

( 57 )

immense charge to the public, with the attendant accumulations of patronage to the minister by the management of new taxes? Least of all should any one declaim on the imperceptible influence, which has been fometimes much dwelt on. While the practice of making close loans was in use, which afforded opportunities of gratifying long lifts of private friends secretly; and beneficial contracts were made with members of parliament, or their friends, from favor only, to a great amount; and fo long, too, as leafes of the landed property of the Crown were renewed from time to time, on terms of great advantage to the leffees, and of lofs to the Crown; while accountants or their reprefentatives were permitted to retain, with impunity, large balances of the public money in their hands for their own emolument; and while home fecret fervice money

(which in the beginning had been popular) he moved, "that "the influence of the Crown had increased, was increasing, and "ought to be diminished." In which motion he prevailed, although the members holding offices during pleasure in the House of Commons were considerably sewer at that time than when he was one of His Majesty's law-servants. Several reforms in office were made in consequence of that vote; but the means of imperceptible and corrupt influence were untouched till done away by Mr. Pitt.

was unlimited, there certainly was an influence hardly at all perceptible, except to the minister befowing those favors, or countenancing those abuses, and to the parties who profited by them. None of those, however, continue to exist; and, with the exception of Crown livings, every man who looks into the Court Kalendar will be nearly as well informed of what the minister has to dispose of as those most immediately in his considence. What he does dispose of is constantly published in the papers of the day.

Among other advantages derived from the labours of the Committees of Finance, the public is accurately informed of the burthens upon it, and how every part of its income is disposed of. Hence we are enabled to state, with precision, the charge incurred by pensions and sinccure employments, and to compare that with the whole of the revenue, which it appears to be desirable should be done, as many well-intentioned persons have taken an impression, that if all those were put an end to, the public might be relieved from a considerable proportion of its burthens.

( 59 )

In the Appendix to the Third Report of the last session, already referred to, it will be seen	
that the penfions to foreign ministers are	€ 30,000
Those at the Exchequer	63,000
Out of the 4½ per cent. duty	28,300
Total of English pensions	* 121,300
Penfions, Scotch Civil List	35,600
	156,900
Sinecures in England +, which will remain after	
the reductions shall take effect, which have	
been already made by law; and the suppref-	
fion of an office in the Admiralty court, after	
the determination of existing interests, of	
which notice has been given	43,000
Sinecure employments in foreign fettlements -	17,300
Do. in Scotland - +	25,000
	f. 242,200
	/3 .   /

Comparisons have frequently been made between the present and former times, in vague and general terms, in support of popular complaints, to shew the necessity of a sweeping reform; a reference therefore to an early period may be useful, admit-

<sup>\*</sup> Exclusive of parliamentary grants, as rewards for public, fervices of the most eminent nature.

<sup>†</sup> Exclusive of those in the courts of law, with which the minister has nothing to do; and, if abolished, compensations must be made for them to the Chief Justices, or to those who have the patronage.

Nothing can be more remote from the intention of the present publication, than a wish to discourage enquiry, or to prevent the fuggestion of falutary checks: the real object of it is to lead others to examine the ground on which the neceffity of adopting stronger measures of restraint as well as of investigation, at the present period, has been repeatedly urged, frequently with the best intentions, and with the purest motives. In endeavouring to fet right the public opinion on this fubject, the performance of an act of justice to the members of any administration, is but a small part of its use; a much more important confideration is, its effect in producing that falutary and reasonable confidence which gives the power of exertion to the government, and that concurrence

( 61 )

currence which feconds its exertions among the people. This is flated, with fome experience of the unpopularity and ridicule that has been fo often attempted to be fixed on the word Confidence, applicable only to that which is unthinking and blind. Stripped of its partial covering, confidence in those who must act for the nation, in its present legitimate sense, is that principle which gives energy and vigour to national enterprize, and strength and security to national defence.

The amount of finecure employments cannot be compared with former periods, as there are no means for enabling that to be done; but we shall find the amount of pensions occasionally in the Journals. In the last year of Queen Anne, it was \* 130,000l. nett in England only, as the 1s. and 6d. taxes did not then exist; at which time the value of money was in the proportion of 257 to 562 at this day †.

<sup>\*</sup> Commons Journals, vol. xviii. p. 84.

<sup>†</sup> See Philosophical Transactions, vol. 88. p. 176, a paper prepared with great care and accuracy, by the late Sir George Shuckburgh.

To what extent, or in what manner, it may be proper to press further retrenchments, the author has not the remotest intention of offering an opinion: his view has been clearly explained; and he trusts the statements will bring to the recollection of his readers what has been done for the attainment of objects of high importance, and of deep interest to the public, by shewing the present state of patronage and influence, compared with what it was in antecedent periods, which have been fpoken of as "good times;" about which he is perfuaded much misconception prevails at this day, even among reasonable and candid men. By some, indeed, it has been said, with a manifest intention of inflaming the public mind, that if finecures and penfions were entirely suppressed, the burthens of the country would be instantly lightened to a great amount, if not entirely removed: an answer to which inflammatory suggestion may be found by a comparison of the before-mentioned total, large as it is, with the amount of the taxes raifed upon the people.

The whole revenue of Great Britain is more than 60,000,000l. a-year; the charge on which,

( 63 )

of 242,000l., for penfions and finecure employments at home and abroad, is between three farthings and one penny in the pound. By the extinction, therefore, of all finecures and penfions, a perfon paying taxes to the amount of 50l. a-year would fave about 4s. Such a faving we are far from thinking should be treated as trifling or infignificant; it would ill become the author to do so: on the other hand, how infinitely short would this fall of the expectation that has been held out?

But if from the total fum received from finecure places and penfions, deductions were made of fuch as have been given as rewards for public fervices, the amount would be very greatly reduced; penfions to foreign ministers, in particular, whose appointments are hardly, in any instance, sufficient for their maintenance.

The pension list also contains provision for the branches of noble and respectable families fallen into decay; this is however an exertion of national generosity, if not of justice, which the most scrupulous economist will hardly consider as improper. Something must certainly be allowed for mere favor;

but when the inflances are clearly improper (and it is not meant to contend there are no fuch), they are at least open to public animadversion; as they are now regularly laid before parliament, and printed from time to time, which certainly affords a considerable, if not an effectual, check against abuse.

If we look to official incomes, it will be found they are, in most cases, barely equal to the moderate, and even the necessary expences of the parties; in many instances they are actually insufficient for these. May we not then venture to ask, whether it is reasonable, or whether it would be politic, that such persons should, after spending a great part of their lives with industry, zeal and sidelity, in the discharge of trusts and public duties, be left afterwards without reward of any fort, and their families entirely without provision?

It would hardly be wife, on reflection, to establish a principle which would have a tendency at least to exclude from the service of their country Men likely to be useful to it. Great numbers of those who engage in trade and manufacture (than whom none are held in higher estimation

by the author) or who enter into various profeffions, frequently acquire very large fortunes, and feldom, if they have talents and perseverance, fail to obtain independence. What fairness, justice, or reason is there then in marking the character of the official man alone with difrespect, and himself as unfit to have reward in any cafe, beyond an annual stipend for his labour and services, just sufficient for his necessary current expences, however faithfully and diligently he may have discharged an important trust for a long series of years? Surely it is not unwife or unreasonable that the public should be in a fituation to bid to a limited extent for talents, in competition with other honourable and lucrative professions, and various branches of trade and manufactures \*...

It has always been justly held in a free country, and particularly in this, to be one of its greatest privileges, that the chief aristocracy, as far as

<sup>\*</sup> The Author most readily admits that fortunes thus acquired are, in general, the honourable reward of talents and industry, fortunately exerted in a country where prosperity has given them room for exertion, and under a constitution which provides at once for their security and their distinction. He has witnessed instances of this fort frequently, with peculiar satisfaction.

It is true that magnanimity and genuine patriotic ambition will look for a nobler reward for their fervices than the emoluments of office; but, in the prefent state of society, a certain appearance is elections, which cannot be maintained without a liberal pro-

( 67 )

provision. That great statesman, who was " poor " amidst a nation's wealth," whose ambition was patriotifm, whose expence and whose economy were only for the public, died in honourable poverty. That circumstance certainly conveys no reproach upon his memory; but when he had leifure to attend to his private concerns, it distressed him feriously to reflect that he had debts, without the means of paying them, which he could not have avoided incurring, except from a parfimony which would have been called meannefs, or by accepting a remuneration from the public, which his enemies would have called rapacity; for he had no expence of any fort that was not indifpenfably necessary, except in improvements in his country refidence, where his house was hardly equal to the accommodation of the most private gentleman \*.

<sup>\*</sup> Towards the latter part of Mr. Pitt's life, fome debts pressed so severely upon him, as to render it necessary for seven of his private and most intimate friends to step in to save him from immediate inconvenience, among whom Lord Carrington was named by a mistake in the paper purporting to be Mr. Pitt's will, which has been published: which assistance Mr. Pitt agreed to avail himself of only on the express condition of his friends receiving repayment of the sums contributed, with interest; for securing which a part of his income was to be set aside, as a sinking fund.—He died! and the nation paid his remaining debts.

Early in 1789, when the nation was in a state of despondency respecting the health of our beloved Sovereign, and a change in the administration was thought extremely probable, it occurred to feveral gentlemen of the first respectability in the city of London, that Mr. Pitt, on quitting office, would be in a fituation of great embarrassment, not only from fome debts which he had unavoidably incurred, but as to the means of his future fubfistence. They felt the strong impression, in which the nation participated, of his great virtues, as well as of his eminent talents; and they were fenfible, in common with their country, of the value of those fervices to which his life had been hitherto devoted, particularly to those commercial interests in which they were deeply concerned. Under this impression a certain number of merchants and ship-owners met, and resolved to raise the sum

## ( 69 )

of 100,000l, to be presented to him as a free gift—
the well-earned reward of his meritorious exertions;
each subscriber engaging never to divulge the name
of himself, or of any other person contributing, in
order to prevent its being known to any one except
themselves, who the contributors were. The only
exception to this engagement of secrecy was a
respectable Baronet \*, who was deputed to come to
the Author to learn in what manner the token of
esteem and gratitude (as it was expressed) could be
presented most acceptably to Mr. Pitt; whose name
was to be as carefully concealed from Mr. Pitt as
the others.

Highly flattering as the offer was, and feafonable as the act would have been (proceeding from a fet of gentlemen whose motives must have been pure and disinterested, not only in such an unequivocal mark of regard for a falling minister, but from the mode of carrying their object into effect,) the au-

<sup>\*</sup> Sir Robert Preston, then member for Dover, who gave many proofs of kindness and attachment to Mr. Pitt, but never asked a fingle favor of him: who being still living, no further tribute of justice can be paid to him.

thor entertained doubts of Mr. Pitt accepting the proffered bounty, and therefore thought it right to apprize him of the intention. This occasioned a long discussion on the subject, which ended in Mr. Pitt expressing a positive and fixed determination to decline the acceptance of the liberal and generous offer: a determination that nothing could shake: for when it was urged that it never could be known to him who the fubscribers were, and that they were men whose fortunes put them out of all probability of ever foliciting the smallest favor from him; his reply was, "that if he should, at any future time of his life, return to office, he should " never fee a gentleman from the city without its coccurring to him that he might be one of his " fubscribers."

This positive determination was communicated by the author to the Baronet before alluded to, which put an end to the measure; and in a few days after, Mr. Pitt, in conversing about his suture plans, told the author, he had taken a fixed resolution to return to the Bar, and to apply unremittingly to that profession, in order to extricate himself from his difficulties, and to secure, as far as he should

( 71 )

should be able, the means of future indepen-

The author will not deny the personal fatisfaction which he feels in having it in his power to communicate this anecdote to his readers: but he conceives that its communication may have a use beyond the mere gratification of private feeling, or of public curiofity. It will shew the spirit of disinterestedness and independence which may exist in times that have been represented as pregnant with felfishness, corruption, and venality; and will furnish an example to future ministers of that sentiment of high and scrupulous honor (a prominent feature in the character of Mr. Pitt) which is the best pledge and guardian of public and private virtue. Were a minister like him to arise, (and who does not pray for fuch an event?) who, besides his own unavoidable expences, had a family to support, his embarrassment must be such as, with a man even of the firmest mind, would hang heavy on its powers, and divide, if not weaken those exertions, which the public weal should engross.

> Carlonaria Carlonaria

In expenditure from the public purfe, there is a distinction sufficiently obvious between pensions and rewards apparently of private favor; and fums expressly devoted to public purposes. The first ought fcrupulously to be investigated, at least as far as the examination may be made without endangering the dignity of enquiry: and we admit, most unequivocally, that the latter ought to be carefully and anxiously watched. We are aware that the general axiom, that wealth is power, is peculiarly applicable to our prefent state, and that the husbanding our resources is necessary for the continuance of that power which is to provide for our own fafety. It must not be deemed invidious if, while we urge a fair and adequate remuneration for public fervices, we distinctly and plainly state our opinion of the propriety of preventing, by every possible means, all fecret emoluments. The public lofes much more than the money by allowing any part of its income to be converted or employed to the use or emolument of its fervants:-it is the advantage, and ought to be the condition, of a fair, open, and liberal reward for public fervice, through all its gradations, to fuperfede every other fource of remuneration. first ( 7.3. )

first is an encouragement to honest and honorable merit in the performance of that service with zeal and sidelity; the last has an evident tendency to taint the purity of office, and to turn into other channels than those of the public interest the exertions of its officers. Nor is it possible for any servant of the public to impose too strict a guard upon himself against deriving the smallest advantage from his situation by any indirect means whatever.

It has been shewn how far there is a ground for the call for further retrenchments, and the extent to which the utmost possible stretch of these would lighten the burthens of the people. It is, in truth, one of those clamours where loudness is substituted for force, but of which the sound is much more powerful than the justice. The retrenchments which have been suggested on more sober grounds, though occasionally by persons not the most conversant either with the resources or the necessary expenditure of the state, have been of two kinds; either of mere occonomy, supposing the services to be indispensible; or of policy, supposing the services to be needless. The last, it is obvious, ought at all times

On the more extensive consideration respecting the expenditure for the great branches of the public fervice, whatever ftrong opinions the author entertains on the fubject, it is not meant to enter into any detail here, as it would not be useful, on his fole authority, to do fo: he will content himfelf with repeating an observation he has made in public, and often endeavoured to enforce in private, that no new or additional expence should be incurred in any department, without the previous knowledge and entire approbation of the minister, who is responsible for the due management of the finances of the country. An invariable adherence to that principle must always be of the very utmost importance: but above all in times like the prefent, when our war-establishment of every fort is not only the instrument of our national glory, but the means of our national fafety, the provision for our national existence. The other branch of saving, that by which the same fervices may be performed at a cheaper rate, deserves the most serious investigation, vefligation, and, it is hoped, has undergone the most anxious consideration, in order to the attainment of that laudable end. But the retrenchments should leave the substantial objects of the expenditure in as sull efficient vigour as before; otherwise the safety of the country would be endangered, at a moment when the storm beats suriously against it, and the ruins of other political sabrics are seen all around us.

The remaining subject of animadversion or complaint, the justice of which has also been examined in the foregoing pages, the increase of the Influence of the Crown, is a topic to which the jealousy of a free country like ours is always disposed to listen, with prepossession in favor of the affirmative; yet, from the celebrated motion of Mr. Dunning downwards, the complaints of this influence, although they have been found to be greatly exaggerated, have been patiently investigated, and effectual means of reform have been adopted.

The greatly increased revenue, and all the other augmented and accumulated business of the state, have unavoidably occasioned some increase of patron-

age; but the influence created by fuch means is infinitely fhort of what has been given up by the measures of economy and regulation to which recourfe has been had, especially when the description and value of the employments created is compared with those abolished; and it will not be denied to us that the manners of the times; the constant existence of a watchful opposition; the modern usage of parliament; the liberty of the press; and the unbounded circulation of the productions which that liberty encourages; all conspire to limit in practice that influence which, in other times, was fo powerful and so prevailing. Not to go back to the more ancient periods of our history, when the great weight of the prerogative bore down all opposition, whether of the parliament or the people; even fince the prerogative has been defined and limited by the Revolution, when the people, having recently shaken off their yoke, were likely to have stretched their newly-acquired rights to the utmost, there has not been a reign in which the influence of the Crown has been fo unceafingly controlled by the jealoufy of the House of Commons as that of His present Majesty.

( 77 )

It is meant to speak with respect of Opposition: that is, of Opposition in the abstract, without reference to any individual person, or combination of persons. An author who wrote the tract here alluded to, under the eye of that great minifter, whose first exertions, after his accession to political power, it was meant to record and illustrate. has defined Opposition in the following impartial and honorable terms; and it is to the credit of that illustrious statesman's candor, and liberality that (as the author informs us\*) Mr. Pitt himself revised and corrected the pamphlet in question: -" It is material " to confider whence arises this general fafe-guard, " which the public possesses, against the malversa-" tion of ministers against the intentional abuse, or " the ignorant misapplication, of the powers with "which they are intrusted. The popular nature " of our government furnishes a check, of which " the operation is constant, because it is excited by " natural and increasing causes. The opportunity " which parliament affords to the young, the " buftling, and the ambitious, of canvaffing public

<sup>\*</sup> History of the Proceedings of the Parliament of 1784, published in 1785. Mackenzie's works, last edition, vol. 7. P. 395.

measures, is one of those falutary counterpoiles which our constitution affords against the weight " of the Executive Power. The Opposition in "Britain is a fort of public body, which, in the practice at least of our government, is perfectly known and established. The province of this ex-official body, when it acts in a manner falutary to the state, is to watch with jealousy over the conduct of administration; to correct the abuses, and to refift the corruptions of its power; to restrain whatever may be excessive, to moderate what may be inconfiderate, and to supply what " may be defective in its measures."

Such, I agree with that author, are the legitimate and respectable functions of Opposition, confidered as a practical branch of the constitution of Great Britain: fuch powers, and fuch jealoufy, it is hoped they will always exercise and entertain.

The most degrading corruption of a statesman, or his friends, is indeed, by the influence of money; but public men may be corrupted by the love of power, as well as by lust of gain; may be bribed by means of their pride, their obstinacy, or their refent(79)

refentment; they may be milled even by miltaken ideas of virtue. In guiding or opposing councils, by which great public interests are fought to be promoted, men must look to the means by which the country may be benefited, independently of private interest, and in possible cases, independently of private reputation. In the machine of State are many movements with which the people are not acquainted; and the statesman who guides them must often serve the people faithfully and effectually by acting contrary to the opinions of what they conceive to be best fuited to their fervice. A virtuous statesman must act from higher motives than either his own immediate interest, or his own immediate reputation: his interest, a patriot statesman must remember, is that of his country; his reputation must often be left to the justice of pofterity.

THE END.
